

Document Database Planning

- Expecting to keep engineering documents and other project documents in 2 different systems
 - Lab is developing Team Center Engineering for engineering documentation, will be using this for this purpose
- Anticipating oft-used DocDB will not be supported over life of the project, explored other options
 - Team Center Engineering for all project documentation: product setup requirements & inputs not readily amenable to general project use
 - Computing Division believes Microsoft Sharepoint could develop into replacement for DocDB: not ready for implementation at this time
 - Proposed using Invenio (ILC using, centered at CERN), but Computing Division not interested in supporting
 - Exploring with BNL's NSLS2 Project their implementation of Sharepoint for their project document management system
- Have acquired Project X DocDB instance for interim use
